Typical VOC		3.26	3.11	4.20	3.18

Square foot coverage varies because of difference in the solids content of each product required to obtain necessary dry film thickness. Surface protection is directly related to care in preparation before painting and the dry film thickness of coatings. A minimum of 4.5 mils (*on smooth steel*) on exterior of tanks is required. Excessive "sweating" of tanks and unusual damp environment requires greater film thickness to retard water and oxygen in the form of vapor from reaching the metal surface beneath.

Quora Bright White Paint Best - Highest Grade 1 On the Market!

Quora Tank Paint is the highest grade 1 component tank paint on the market. It acts like a urethane, giving your tank the ultimate protection. This paint is quick drying, long lasting, mildew resistant and provides excellent coverage. **Quora** is often used on large fertilizer tanks and in applications where longevity of the paint is crucial.
