

Economy Wash Packages

Economy Wash Packages are the ideal choice when a smaller, simpler system is required for your cleaning needs. Very popular for apartment complexes, boat marinas, golf courses, parking garages and more. A great way to offer high pressure soap and rinse (*wax option also available*) to your customers by either charging for use or offering as a free option.

Various meter control boxes are available and can be activated with coins, tokens or credit cards for payment or with manual start/stop boxes and demand panels with "time out" feature if you do not wish to charge. Available with and without "weep" option for freeze prevention.

Note: Demand panels are not available with freeze prevention option.

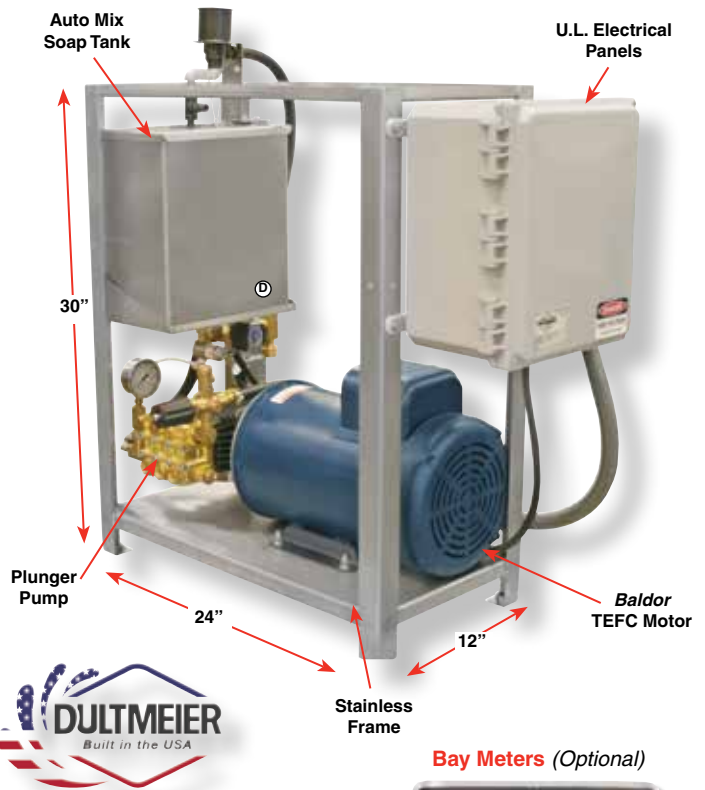

EWS10 Systems are complete with pump/motor unit, soap and rinse valves, U.L. listed electrical panel, stainless steel wall boom (*ceiling available*), auto soap mixing tank, trigger wand assembly, 25' abrasion resistant hose, stainless wand holder, stainless hose hook and instruction wall signs.

Note: Does not include weep system, for use in non-freezing environments or locations. Meter boxes are not included and are priced separately as many options are available.

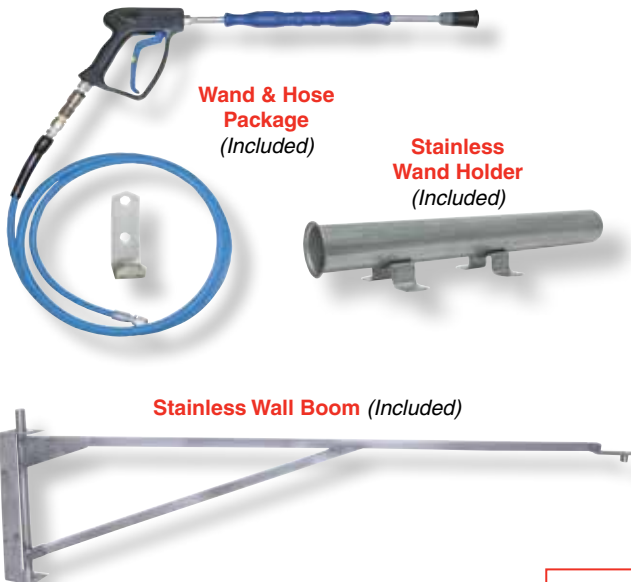

EWS10W Systems are complete as above, but include "110 volt thermostat and solenoid valve" for automatic weeping of water through spray wand when temperatures are below freezing.

Note: Meter boxes are not included and are priced separately as many options are available.

EWS10D Systems are complete as above, but are "demand" systems. *These units include manual control box for free washing. Time out demand feature shuts system off after customer is finished. Simply pull spray wand handle to turn on system for wash/rinse. (*No weep systems on these units, for use in non-freezing environments only*). All systems are available with flow, pressure and horsepower options shown below. Models are standard with single phase motors, but three phase also available.

OUTPUT RATINGS	
2 HP / 1 PH, 110 Volts	will produce 2.8 GPM @ 1000 PSI
3 HP / 1 PH, 230 Volts	will produce 3.2 GPM @ 1300 PSI
5 HP / 1 PH, 230 Volts	will produce 3.8 GPM @ 1800 PSI
