

Weld-on or Butt Weld fittings are commonly used in food grade applications. The benefit of weld-on fittings is that they eliminate the possibility of debris becoming entrapped in crevices such as threads. These fittings come standard in 32Ra polished finish 316L Stainless Steel (unpolished finish available on some product lines). Some product lines and sizes are available in 304 Stainless Steel upon request. ***Note** – not all product lines hold 3-A Sanitary Certification. ***Note** – Sanitary Fittings are standardized in tubing measurements – this means that the pipe/fitting size is determined by the Outer Diameter (OD) – not the Inner Diameter (ID) like other pipe fittings.
