NEW Delco Dual Wash Pro Series

Delco DualWash Pro systems combine low-pressure soft washing and high-pressure cleaning on one engine-driven skid. A heavy-duty stainless-steel three-way valve lets the operator change wash modes mechanically, without batteries, wiring, or electronic controls. Each model provides 300 PSI in soft-wash mode and either 3,000 or 4,000 PSI for high-pressure cleaning. Choose 8 or 10 GPM output, a CRX or Honda engine, and a stainless-steel or nickel-plated brass pump manifold. Chemical-resistant high-pressure seals, stainless-steel fittings and couplers, pressure and thermal relief valves, and an anodized aluminum baseplate support demanding commercial cleaning environments. Optional soft-wash hose, wash-down guns, chemical injector kits, and quick couplers allow the system to be configured around the application. There is NO need to turn off the engine to switch from soft wash to power washing.

- Use one skid for 300 PSI soft washing and 3,000 or 4,000 PSI high-pressure cleaning. One unit: two systems.
- Select 8 or 10 GPM configurations to match cleaning method and accessory requirements.
- Change operating modes with a stainless-steel three-way valve instead of electronic switching controls.
- Choose a stainless-steel or nickel-plated brass Comet TW-D pump manifold.
- Chemical-resistant seals and stainless-steel fluid-handling components support aggressive soft-wash solutions.
- A welded anodized aluminum baseplate provides a corrosion-resistant mounting platform with forklift slots and vibration dampers.
- No need to turn off the machine to switch from low pressure to high pressure – without damaging equipment.
- Dedicated lines for high pressure and low pressure – controlled by stainless steel 3-way ball valve.
- Warranty: Lifetime Pump Manifold and 5-year Pump / Honda or CRX Engines: 3-year
- Shipping Dims: 41" L x 27" W x 23" H and 254lbs
